

Trigonometrie Aufgabe 37

Berechnen Sie β , b und c .

Im Dreieck DBC:

$$\sin \beta = \frac{h_c}{a} = \frac{12,9 \text{ cm}}{20,4 \text{ cm}} = 0,6324 \rightarrow \beta = 39,2^\circ$$

$$\alpha = 90^\circ - \beta = 90^\circ - 39,2^\circ = 50,8^\circ$$

Im Dreieck ABC:

$$\cos \beta = \frac{a}{c} \mid *c$$

$$c * \cos \beta = a \mid : \cos \beta$$

$$c = \frac{a}{\cos \beta} = \frac{20,4 \text{ cm}}{0,7749} = 26,3 \text{ cm}$$

$$\cos \alpha = \frac{b}{c} \mid *c$$

$$c * \cos \alpha = b$$

$$b = 26,3 \text{ cm} * 0,632 = 16,6 \text{ cm}$$
